Integrated Environmental and Energy Policy

Konzelmann GmbH | Environmental Management DIN EN ISO 14001 and Energy Management DIN EN ISO 50001

Konzelmann GmbH assumes responsibility for the environment, the climate and the sustainable use of energy and resources. Environmental and climate protection, as well as the continual improvement of energy performance, are integral parts of our corporate strategy and daily activities.

We consider the impacts of climate change on our organization as well as the environmental and climate impacts of our activities, products and services. We assess environmental and energy aspects throughout the parts of our products' and processes' life cycle that are within our sphere of influence and take into account the expectations of customers, employees, suppliers, regulatory authorities and other interested parties.

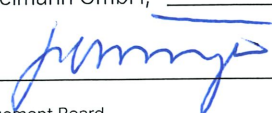

Our Commitments

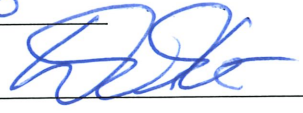

Continually improve our environmental performance and energy performance.	Prevent environmental impacts and use natural resources responsibly.
Use energy, raw materials, water and operating materials efficiently.	Reduce greenhouse gas emissions, promote climate protection and strengthen resilience to the impacts of climate change.
Protect biodiversity, ecosystems and natural livelihoods.	Avoid waste, promote recycling and strengthen the principles of the circular economy.
Consider environmental impacts throughout the life cycle of our products and within our supply chain.	Regularly record, monitor and evaluate energy indicators, significant energy uses and energy flows.
Promote energy-efficient technologies, products, services and investments.	Regularly assess environmental and energy-related risks and opportunities and derive appropriate measures.
Comply with applicable legal requirements and other binding obligations.	Provide the information and resources required for environmental and energy management.
Raise employee awareness, develop competence and actively involve employees in environmental and energy objectives.	Review objectives regularly and effectively track improvement measures.

Implementation and Responsibility

To implement this policy, we operate an integrated environmental and energy management system. We regularly monitor our environmental and energy indicators, evaluate the effectiveness of our measures and derive new objectives and improvements. The Management Board is responsible for the effectiveness of the management system and its continual development.
